Name of Department:- Computer Science and Engineering

1. Subject Code: TCS 302 Course Title: **Data Structures with C**
2. Contact Hours: L: 3 T: - P: -
3. Semester: III

4. Pre-requisite: Good Knowledge of Programming in C (TCS 101, TCS 201)

5. Course Outcomes: After completion of the course students will be able to

1. Describe the concept of Data Structures and assess how the choice of data structures impacts the performance of programs
2. Compare and contrast merits and demerits of various data structures in terms of time and memory complexity.
3. Identify and propose appropriate data structure for providing the solution to the real world problems.
4. Implement operations like searching, insertion, deletion, traversing mechanism etc. on various data structures
5. Be familiar with advanced data structures such as balanced search trees, hash tables, AVL trees, priority queues, ADT etc.
6. To augment merits of particular data structures on other data structure to develop innovation in subject of study.

6. Details of Syllabus

UNIT	CONTENTS	Contact Hrs
Unit – I	**Introduction:** Basic Terminology, Pointer and dynamic memory allocation, Elementary Data Organization, Data Structure operations, Algorithm Complexity and Time-Space trade-off Arrays**:** Array Definition, Representation and Analysis, Single and Multidimensional Arrays, address calculation, application of arrays, Array as Parameters, Ordered List, Sparse Matrices. Stacks:Array. Representation and Implementation of stack, Operations on Stacks: Push & Pop, Array Representation of Stack, Linked Representation of Stack, Operations Associated with Stacks, Application of stack: Conversion of Infix to Prefix and Postfix Expressions, Evaluation of postfix expression using stack. Recursion: **Recursive** definition and processes, recursion in C, example of recursion, Tower of Hanoi Problem, tail recursion.	**10**
Unit - II	**Queues:** Array and linked representation and implementation of queues, Operations on Queue: Create, Add, Delete, Full and Empty. Circular queue, Dequeue, and Priority Queue**.** **Linked list**: Representation and Implementation of Singly Linked Lists, Two-way Header List, Traversing and Searching of Linked List, Overflow and Underflow, Insertion and deletion to/from Linked Lists, Insertion and deletion Algorithms, Doubly linked list, Linked List in Array, Polynomial representation and addition, Generalized linked list.	**10**
Unit – III	**Trees**: Basic terminology, Binary Trees, Binary tree representation, algebraic Expressions, Complete Binary Tree. Extended Binary Trees, Array and Linked Representation of Binary trees, Traversing Binary trees,	**9**

	Threaded Binary trees. Traversing Threaded Binary trees, Huffman algorithm & Huffman tree**.** **Searching and Hashing**: Sequential search, binary search, comparison and analysis, Hash Table, Hash Functions, Collision Resolution Strategies, Hash Table Implementation	
Unit – IV	***Sorting****:* Insertion Sort, Bubble Sorting, Quick Sort, Two Way Merge Sort, Heap Sort, Sorting on Different Keys, Practical consideration for Internal Sorting. **Binary Search Trees**: Binary Search Tree (BST), Insertion and Deletion in BST, Complexity of Search Algorithm, Path Length, AVL Trees	**9**
Unit – V	**File Structures**: Physical Storage Media File Organization, Organization of records into Blocks, Sequential Files, Indexing and Hashing, Primary indices, Secondary indices, B+ Tree index Files, B Tree index Files, Indexing and Hashing Comparisons, Graph, Traversal(DFS,BFS) ,Minimum spanning tree	**8**
	Total	**46**
